

Why Every Hotel Needs Mobile Keys Without App Install

Webapp-powered mobile keys

Guests receive a link as part of the standard confirmation email or via SMS. The webapp opens when they click this link. Then the guest presses the button within the app and the door opens immediately.

Staff training and onboarding

The easier your access system is to use for staff, the more it will help them save time and optimise operations.

Improved Guest experience

New hotel tech should always aim to improve your guest's experience by making the stay smoother and more fun.

Security

Instead of sending a direct signal between the phone and the lock, everything runs via the cloud which increases security.

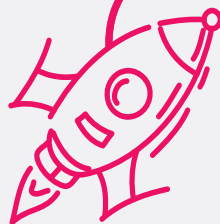

Future readiness

Webapp-based mobile keys use a cloud-based system. This automatically updates all devices property-wide as they're linked via the Internet of Things.

Higher adoption rates

The average adoption rate for webapp-powered access systems reaches up to 80% or more. The reason: not having to download an app and needing only two clicks to open any door.

Are you ready for higher adoption rates?
